

Founding Engineer Partnership Proposal

Musebook — Humane, Accessibility-First AI

This document outlines a proposed partnership for a Founding Engineer interested in helping build the first working version of Musebook. This is not a traditional job description. It is an invitation to collaborate on an early-stage, mission-driven product with real-world impact.

What Musebook Is

Musebook is an early-stage, accessibility-first AI project designed to support thinking, learning, and creative work without surveillance, performance pressure, or productivity metrics. It is being built with neurodivergent users in mind, but the underlying philosophy is broader: technology should support cognition, not extract from it.

The first version of Musebook is intentionally calm and minimal. It acts as a notebook and thinking companion that users can return to without guilt, shame, or friction.

Why This Exists

Most modern tools optimize for speed, output, or monitoring. Musebook takes a different approach. It prioritizes trust, accessibility, and long-term sustainability for users who are often underserved by existing software.

The Founding Engineer Opportunity

We are seeking a Founding Engineer to help build a demo-ready MVP of Musebook. The goal is not a fully polished product, but a working prototype that communicates the philosophy, tone, and direction of the platform.

This partnership begins as equity-based rather than salaried. We want to be transparent about that. The initial scope is intentionally limited (approximately 4–6 weeks) and focused on producing something real that can be shown to early adopters and pilot partners.

What We're Looking For

- A thoughtful programmer who enjoys building simple, usable tools
- Comfort working in early-stage ambiguity
- Interest in accessibility, education, or humane technology
- Clear communication and collaborative instincts

What We're Offering

- 4–5% equity with standard 4-year vesting and a 12-month cliff
- Founding Engineer recognition and authorship
- Real influence over technical decisions and architecture
- Clear scope, protected time, and no expectation of overwork
- A path to paid work or expanded role as funding becomes available

How We Work

Musebook is being built deliberately. We value clarity over speed, sustainability over hype, and trust over control. This means defined scopes, regular check-ins, and respect for personal time and other commitments.

Who This Is (and Isn't) For

This opportunity is well-suited for someone early in their career or someone motivated by ownership, meaning, and real-world impact. It is likely not a good fit for someone seeking immediate salary or short-term contract work.

Closing Note

If Musebook's mission resonates with you, we would love to start with a conversation. This proposal is meant to provide clarity and transparency—not pressure. The goal is mutual alignment and trust.
